Hello,

My name is Kennon Dong and I am a 24 year old looking for a job in Programming or IT. I heard that your company is looking for programmers from a friend and I would like to apply. I am currently studying at Douglas College in New Westminster, BC for a diploma in Computing Studies & Information Systems but I am also graduating this year in February 2023.

Through schooling I have learned aspects of software engineering principles, web development, cyber security, app development, database management, system analysis and design, and building software architecture. I am well versed in many development languages like Python, Java, C#, while also having experience in scripting languages like Powershell 8, Bash, and Python. I am excited to learn any other language needed if it is required. I am interested in learning C, Elixir, and Rust languages for example.

I am familiar with working both individually and in a group setting even taking up leadership roles when needed, as it was required for school projects. I am mostly interested in being a developer since it is my dream job, but I am happy with any position your company requires. I am hoping by joining your company, I can help with the workload for everyone in anyway I can. If you do decide to consider me, I promise to work both hard and smart for you.

On my resume I have listed all my qualities for the position, but I also have created many personal and academic projects such as creating video games, mobile applications, and a website which are archived on my GitHub (KennyDev0213). If you have further questions or would like to contact me, my email is Kedong0213@gmail.com or you can call me at 778-861-8003 on Thursday to Sunday between 8am to 8pm. Thank you for considering my application and I hope to hear from you soon.

Kennon Dong
